What things did Calvin change after being unsuccessful in hitting the ball during his first attempt? Size of the ball. What else could he have changed? Add a tee. Increase the size of the bat. Decrease the weight of the bat. Others?

To create your own task-analysis grid, do the following:
Identify the motor task(s) and task goal-ex: striking a ball with a bat
Select 3-4 task factors that are likely most salient and important to performing the task (columns)
  - Practice situations-ex: the toss (add a tee)
  - Equipment-ex: the ball (increase the size of the ball)
  - Result-ex: target (make contact)
Within each task factor, determine a simple-to-complex continuum of difficulty
